DETAILED ACTION

Specification

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. **Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Attar (US 2002/0025222 A1).** Attar discloses a stationary board adapted to be set up in a medial strip between traffic lanes to block lights of oncoming vehicles in said medial strip and facilitate identification of said medial strip in nighttime driving or riding, as supported by Attar's disclosure about roadway markers being adhered to pavements along centerlines, edge lines, lane dividers or guardrail delineators (pg 1, Para. 0004), said stationary board comprising a pair of plate members, seen as the two planar reflective faces (110) in Fig. 14, each composed of a molded component made of a transparent plastic material, as disclosed by Attar on pg 4, para. 0078, said plate members being coupled with one another at the respective marginal edges thereof, shown in Fig. 14 as

Art Unit: 3671

the top (121) and base (150) connecting the two planar reflective faces (110) together, to form an integrated assembly having a hollow space therein, disclosed by Attar by the hollow cavities (165) (pg 4, para. 0078) and hollow cavity air gaps (pg 4, para. 0080) wherein each of said plate members is formed with irregularities in its inner surface facing said hollow space of said assembly, disclosed by Attar as the cube corner reflective elements (115c) on pg 4, para. 0080 and Fig. 14, and at least the marginal region of said inner surface has a coat layer of a luminous material thereon, since Attar discloses that the faces (110) are reflective (pg 4, para. 0080).

Allowable Subject Matter

4. Claims 2-4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
